

**MONTHLY PROGRESS REPORT #109  
FOR APRIL 2006**

**EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014**

**MASSACHUSETTS MILITARY RESERVATION  
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from April 1 to April 30, 2006. Scheduled actions are for the six-week period ending June 16, 2006.

**1. SUMMARY OF REMEDIATION ACTIONS**

The following is a description of remediation actions taken as part of or in preparation for Rapid Response Action (RRA) Plans for various Areas of Concern at Camp Edwards through April 30, 2006. An RRA is an interim action that may be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of contamination to groundwater and/or soil.

Demo Area 1 Groundwater RRA

The Demo Area 1 Groundwater RRA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge systems (ETR) at Frank Perkins Road and Pew Road include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Pew Road ETR continues operation at a flow rate of 100 gallons per minute (gpm). As of April 28, 2006, approximately 81 million gallons of water have been treated and re-injected at the Pew Road ETR System.

The Frank Perkins Road ETR continues operation at a flow rate of 220 gpm. As of April 28, 2006, approximately 177 million gallons of water had been treated and re-injected at the Frank Perkins Road ETR System.

Well installation at extraction well EW-D1-502 was completed and well installation at EW-D1-503 commenced.

Groundwater samples were collected as part of the Demo Area 1 System Performance and Ecological Impact Monitoring (SPEIM).

J-2 Range Groundwater RRA

The J-2 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and infiltration basins to return treated water to the aquifer.

Completed pipeline installation up to well vault locations. Completed well development of extraction well J-2 EW0003 and extraction well J-2 EW0001. Unexploded ordnance (UXO) clearance for power poles and Performance Monitoring Evaluation (PME) wells was performed. Commenced drilling PME wells. Completed pad for mobile treatment units (MTUs) and moved MTUs from the H Range to the J-2 Range. Began setting new power poles along Barlow Road.

J-3 Range Groundwater RRA

The J-3 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

Completed well development at extraction well J3 EW00032 and commenced well development at 90EW0001.

## 2. SUMMARY OF ACTIONS TAKEN

Drilling progress for the month of April is summarized in Table 1.

<b>Table 1. Drilling progress as of April 30, 2006</b>				
Boring Number	Purpose of Boring/Well	Total Depth (ft bgs)	Depth to Water Table (ft bgs)	Completed Well Screens (ft bgs)
MW-436	J-2 Range (J2P-59)	346	110	235-245, 295-305
DP-408	Impact Area (CIADP-01)	144	137	
ft bgs = ft below ground surface				

Completed drilling and well installation at MW-436 (J2P-59). Completed drilling at DP-408 (CIADP-01).

Samples collected during the reporting period are summarized in Table 2. A groundwater profile sample was collected from DP-408 (CIA-DP01). Groundwater samples were collected from recently installed wells at the J-2 Range, J-3 Range and Demo Area 2. Round 1 of the Interim Groundwater Monitoring Plans (GMPs) for 2006 was completed at the J-2 Range East on April 6, 2006. Groundwater sampling as part of the Interim GMPs for 2006 continued at the Northwest Corner, Impact Area, Former A Range and Western Boundary. Soil samples were collected at the T Range as part of site characterization. Supplemental soil samples were collected at BIP locations and at additional target locations in the J-1 Range, J-2 Range, J-3 Range, and U Range. Surface water samples were collected near a public beach, a private beach, and near the spit at Snake Pond. Pore water samples were collected from Impact Area lysimeters.

UXO clearance at drivepoint locations for direct push drilling in the Central Impact Area continued. Performed access road construction for drivepoint locations. An EM-61 survey was performed on UXO Test Plots.

At Demo Area 1, the low volume drip irrigation system for transplanted vegetation was installed.

Inspection and segregation of material potentially presenting an explosives hazard (MPPEH) was conducted from roll-off containers at Chadwick Road.

The following bullets summarize the Blown-in-Place (BIP) items for the month of April:

- Impact Area:
  - April 6, 2006: One (1) 105 mm, HE projectile at drivepoint CIADP-08
  - One (1) 155 mm, HE projectile at drivepoint CIADP-08
  - One (1) 105 mm, HE projectile at drivepoint CIADP-15

One (1) 105 mm, HE projectile at Test Plot M2  
One (1) 105 mm, HE projectile at Test Plot M2  
One (1) 105 mm, HE projectile at Test Plot M2  
One (1) 4.2 inch, HE projectile at Test Plot H2

- J-2 Range

April 6, 2006: Three (3) 30 mm, HEI projectiles at grid M17  
Five (5) 30 mm, HEI projectiles at grid M18

Pre- and post-BIP samples, summarized in Table 2, were collected in accordance with the sampling protocol.

J-1 Range Supplemental Geophysical Anomaly Investigation continued at grids I39, J39, J40, L38, M38, and M39. Table 3 shows a grid sheet summary for excavation and munitions recovered for the J-1 Range Supplemental Geophysical Anomaly Investigation for the period ending April 27, 2006.

Anomaly investigation as part of the J-2 Range Supplemental Geophysical Anomaly Investigation continued at grids I13, I14, J13, J14, J15, K15, L14, and L16. Table 4 shows a grid sheet summary for excavations and munitions recovered for the J-2 Range Supplemental Geophysical Anomaly Investigation for the period ending April 27, 2006. BIPs were conducted at grids M17 and M18.

**The following are the notes from the April 13, 2006 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards:**

Western Boundary Interim Groundwater Monitoring Plan MOR – EPA Concerns

Carol Keating (EPA) noted that she and Bill Gallagher (IAGWSP) have been negotiating changes to the existing Plan since last April. The IAGWSP's goal was to develop an interim plan to continue monitoring until the Remedial Investigation (RI) Report was completed. Once the RI Report is completed, then a new plan will be developed based on the finding of the report. An interim plan was proposed which eliminated a number of monitoring wells and decreased the frequency of sampling in others. The plan followed the old LTGM protocol with primary, secondary, and tertiary wells which would be sampled from one to three times per year.

The RCL process was reviewed and the EPA pointed out that the latest MOR eliminated the December sampling round. The IAGWSP stated that this was done so that the sampling program matches the fiscal year budgeting and contracting schedule.

IAGWSP has proposed a maximum of two rounds of sampling for all other OU's. For the Western Boundary the IAGWSP anticipates the completion of the April/August sampling rounds and then a new long-term monitoring plan being developed based on the findings of the RI. The December round would only be executed if agreement on the this new plan could not be reached

EPA requests the contingent plan be clearly stated in the MOR including what sampling will be done in December in the event a long term monitoring plan is not in place.

Resolution: IAGWSP will provide a revised MOR, including the first MOR responses plus text detailing the contingent December sampling event.

Former K Update – Way Forward

A follow-up discussion was held regarding outstanding issues on additional soil and groundwater investigation requested by EPA as part of the Former K RI Report. MAJ Lefebvre (USACE) suggested a discussion to determine which of the six items remain open as it has been some time since the Former K plan was reviewed. Lynne Jennings (EPA) stated the UXO issue needs to be discussed; she will layout issue-by-issue and discuss in an RPM meeting.

- It is EPA's position that additional work needs to be done. IAGWSP's position is the RI identified no contamination in the groundwater that would track back to Former K.
- Bob Lim (EPA) stated that subsurface soil sampling may be required to complete the risk assessment.
- IAGWSP suggested investigating the road along the northern end of the range to confirm the condition of shallow groundwater migrating from the Former K Range. Mr. Hill noted nothing has been found in the soil and there are no groundwater impacts associated with perchlorate and explosives; if a major plume is coming from Former K, it would have been detected from the data collected to date.
- Ben Gregson (IAGWSP) stated he could agree to install two drive points in the Areas C and F where access is already cleared if that would closeout the groundwater issue with EPA. MAJ Lefebvre pointed out there have not been any explosives detections in soil at Area F so it doesn't make a whole lot of sense to put a drive point at Area F. Bob Lim will review the data to determine the path forward and will respond to IAGWSP.
- Mr. Lim noted during the Risk meeting held in Boston it was agreed that subsurface soil sampling using the CRREL method is difficult; and leaving more traditional subsurface soil sampling as the only viable option.
- Mr. Gregson (IAGWSP) stated samples were collected from the surface to 12 inches using 0-3 inch, 3-6 inch, and 6-12 inch depth intervals. The IAGWSP stated that higher concentrations are expected closer to the surface and that
- Areas E and C are the only areas with explosives detected. If explosives concentrations drop off considerably from the surface to the 3-6 and 6-12 intervals, then additional sampling is probably not warranted. IAGWSP will review Areas E and C at 6-12 intervals. The IAGWSP will propose additional deeper samples if needed to complete the RI.
- Mr. Lim (EPA) discussed the risk screening issue Agreement has not yet been reached on how to model leaching to groundwater to determine COCs. EPA has concerns with the assumptions in the SESOIL modeling and has proposed a similar screening approach and will roll it out in about a month. This issue is being worked out as part of the HERA Work Plan MOR.
- Mr. Hill of IAGWSP said he thought Art Rood (EPA) and Larry Cain (USACE) were tasked to review assumptions and come to the larger group with resolution.
- Action Item: Mr. Hill and Ms. Jennings will schedule a joint meeting with EPA and IAGWSP technical staff. EPA wants a chance to review their approach and will come back to the IAGWSP with input.
- EPA disagrees that site has been characterized to an RI level. EPA considers level of effort to date to be consistent with SI. IAGWSP stated the under the IRP program, this site probably would have been closed after the SI phase.
- MAJ Lefebvre requested information on why Specific Comment 3 (Area C not being determined as a target area) is still open. Mr. Lim will review his notes and reply.

Supplemental Geophysical Investigation J-2 and J-1 Update

- J-1 - Darrin Smith (USACE) reports no fieldwork has been performed since last update.
- J-2 – Priority 1 Grids Tech Memo RCL submitted 30 March. Completed investigation of 24 anomaly locations to date. As reported earlier, two of the locations (locations 8 and 28) contained MEC burial pits, with MEC consisting of primarily 30mm HE and HEI projectiles.

Three locations contained remnants of former target controls pits. The remaining locations contained miscellaneous MD and RRD. Currently working at location 35. Also, collected three linear composite samples along the borders of grids J through L 13 and 14 on 31 March. There are a total of 36 targets in J-2.

EPA is not satisfied with the RCL on the J-2 P1 Grids Tech Memo. Ms. Jennings felt technical items were disregarded. She proposed a focused CRM be held to discuss: 1) Pointed statistical approach on identifying target pits; 2) Issues on data - if investigation was adequate and if the way forward is adequate. What data gaps need to be filled? EPA would like to develop a comprehensive way forward.

Mr. Hill suggested identifying the data available and a plan to move forward.

- J-1 – Mr. Hill introduced a proposal to begin working on select J-1 anomaly locations in the Interberm area and southern portion of the range, which are the assumed sources of the J-1 North and J-1 South plumes. Of the 41 targets, half are in the 2000 meter berm area, and are not associated with groundwater contamination. Two graphics were provided and EPA approval was requested to begin investigation at select J-1 anomaly locations to research the source of Interberm Area Plume. EPA provided concurrence with this approach, but noted that all identified targets/anomaly locations should be investigated, not just those associated with the Interberm Area Plume.

ACTION ITEM: Mr. Hill will furnish a list of J-1 targets to EPA, prioritizing ones that likely occur in the Interberm area and southern portion of range.

EPA requested a schedule of when all the targets identified will be investigated.

- J-2 BIP Schedule – Week of 4/24 BIP excavation. J-2 first in priority.
- Jane Dolan requested a map of current area BIP excavations on J-2 range. Dave Hill will provide.
- IAGWSP will provide the 2004 and 2005 BIP reports in early May.
- IAGWSP recommended the first two quarters of 2006 be in one report and quarterly for the remainder of 2006. A delivery date needs to be identified. Mr. Gallagher requested a meeting to discuss streamlining the data table format. (The existing format will be used for 2004 and 2005 data). EPA concurred.

### IART Meeting for April 2006

The EPA convened a meeting of the Impact Area Groundwater Review Team on April 25, 2006. The agenda included a discussion of community involvement issues, updates on the treatment system construction, Snake Pond drive point wells, and tungsten, and presentations on the Ammunition Supply Point Rapid Response Action (RRA) Workplan and Groundwater Monitoring Plans for the Central Impact Area and Former A Range.

### **The following are the notes from the April 27, 2006 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards:**

#### Western Boundary RI Scoping – Risk Assessment Discussion

Carol Keating (EPA) indicated EPA is requesting further discussion on how the State's proposed standards will be incorporated into the Risk Assessment (RA). IAGWSP's intention when conducting risk assessments is to prefer EPA-approved reference doses published on the IRIS database. With regard to perchlorate, MassDEP developed a reference dose at the time the EPA reference dose was under development. In the interim, MassDEP applied uncertainty factors in addition to those subsequently recommended by the EPA. The result was a more stringent reference dose than is now recommended by the EPA. The more stringent reference dose resulted in a more stringent MCP draft standard for perchlorate, which is expected to be promulgated soon, becoming available for RI/FS analysis.

Ben Gregson (IAGWSP) indicated that the Northwest Corner draft RI used the EPA reference dose in the Risk Assessment. The draft Western Boundary RA will be issued in June 2006 and IAGWSP intends to use the EPA reference dose. If there is a promulgated standard MMCL at that point, then that number would apply.

Len Pinaud (MassDEP) noted when MassDEP issues draft standards for promulgation; the standard becomes the interim standard and is, in effect, the State-wide standard to use for MCP response actions until the values are promulgated. Perchlorate standards are due for promulgation in July. MassDEP requested the Army consider using the interim standard even though the standards are not yet promulgated, to avoid duplication of work.

EPA stated that exceedances of the promulgated standard may in and of itself indicate the presence of a risk when determining the path forward.

Mr. Gregson agreed to consider conducting IAGWSP risk assessments using the EPA Reference Dose and presenting the risk based on the MassDEP Reference Dose for perchlorate as an uncertainty to better inform risk management decisions.

#### SE Ranges Update

Darrin Smith (USACE) reported investigation is currently ongoing in the J-1 and J-2 Ranges.

- J-2 – To date, 28 targets have been investigated. No burn pits or MEC burial pits have been found in the most recent round of investigations at anomaly locations outside the prioritized grids. An MD burial, consisting of metal trash containers with inert 66 mm rockets and empty 3.5" rockets was uncovered recently at one location. Discolored residue (suspected to be from the corrosion of co-located scrap metal) was uncovered at another location and will be investigated further.
- As reported previously, two MEC burial pits were uncovered during the previous round of investigations at anomaly locations within prioritized grids M-29 and M-30.

IAGWSP and EPA have agreed to meet on Wednesday, 03 May at 10:00 AM. Mr. Hill will prepare an agenda that includes resolution of the J2 Tech Memo RCL issues that can be addressed without the statistical analysis contractors in attendance and the J-2 SOU Data Gap analysis presentation. Prior to the meeting, Ms. Jennings and Mr. Hill will provide the specific meeting data.

EPA requested a follow-up meeting with the statistical analysis contractors to discuss:

1. Specific comments on the statistical approach that were not responded to in the J2 Tech Memo RCL
2. Discussion on the approach of identifying targets for investigation.

Jay Ehret (USACE) reported on the status of J2 and J3 RRA construction.

- All extraction wells have been installed and developed; the entire pipeline has been installed. The two MTUs have been moved from the H Range to Wood Road and have been hooked up.
- Look Ahead for J-2 Range: Begin electrical conduit trenching; anticipate delivery of vaults and vessels early next month.
- Camp Good News – All pipelines and extraction wells have been installed. Currently developing extraction well J2EW0032, then plan to move to develop extraction 90EW001. Construction at Camp Good News is on schedule to be complete before the Friday, 26 May Memorial Day deadline.

The Article regarding the two proposed wells on Windsong Road is on the 01 May Town Meeting Agenda.

#### CIA Field Update

Scott Greene (USACE) presented the April CIA Field update.

- Grubbing is complete at all six test plots; the EM-61 survey will be complete 28 April.
- HUTA II/SCAR sampling is complete. Results were received on 26 April and will be emailed to EPA today. All samples were non-detect.
- Driven Wellpoints: UXO clearance was completed on 14 April. ECC subcontractor Zebra was unsuccessful in installing a drivepoint at any of the 3 locations tried last week with the geoprobe rig. AFCEE, using the same model geoprobe, was able to advance a drivepoint to the desired depth at the one location they attempted. The next step is to evaluate why Zebra was not able to reach the required depth. If Zebra's problem can be isolated, retry; alternatively, a mini-sonic rig will be mobilized to complete the drilling program, which would require more UXO clearance.

The schedule is now in flux due to the availability of the mini-sonic rig, AFCEE geoprobe rig, and possible additional UXO clearance requirements.

#### Tango Range Sampling

Paul Nixon (IAGWSP) reported that sampling is complete at Tango Range and the Project Note will be issued by Monday, 01 May.

EPA felt IAGWSP had a misunderstanding of the status of issues presented by EPA. IAGWSP's understanding was that all issues were resolved and therefore proceeded with sampling the next day. EPA's understanding was that the issue to have a replicate sample in a fourth area of Area 1, and a discussion on the size of Area 3 needed to be discussed before sampling and EPA feels the sampling was done at risk. The IAGWSP suggested waiting until the results are obtained from the current sampling effort before deciding what additional sampling may be warranted. In addition, the overall range construction plan needs to be discussed with COL Fitzpatrick.

Mr. Nixon requested a site visit to Echo Range and Sierra Ranges following the meeting at 2:00 PM. IAGWSP and EPA personnel involved in the site walk will arrange the date and time for the site walk.

### **3. SUMMARY OF DATA RECEIVED**

Validated data were received during April 2006 for Sample Delivery Groups (SDGs): E041006, E041706, SG0160, SG0170, SG0180, SG0185, SG0186, SG0187, SG0188, SG0189, SG0191, SG0192, SG0193, SG0194, and SG0195.

These SDGs contain results for 99 groundwater samples from supply and monitoring wells.

#### Validated Data

Table 5 (sorted by analyte) summarizes the detections, since 1997, that equaled or exceeded an EPA Maximum Contaminant Level (MCL) or Health Advisory (HA) for drinking water, or equaled or exceeded a 4 ppb concentration for perchlorate. Table 5 is updated on a monthly basis; discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 6 summarizes first-time validated detections of explosives below the MCL/HA for drinking water or of perchlorate below a 4 ppb concentration received from March 24, 2006 through April 21, 2006. First-time validated detections of VOCs, SVOCs, herbicides and pesticides are included and discussed quarterly in the March, June, September, and December Monthly Progress Reports. Metals, chloroform, and bis (2-ethylhexyl) phthalate (BEHP) are excluded from Table 6 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (July 1997) to the present. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses (collectively referred to as "metals", though some analytes are not true metals) by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, IM40MBM, and IM40HG. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 3 shows the results of Volatile Organic Compound (VOC) analyses by methods OC21V, OC21VM, 504, 8021W, and SW8260 exclusive of chloroform detections. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the Volatile Organic Compound (VOC) analyses by method OC21V and OC21VM. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 5 shows the results of Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270, exclusive of detections of BEHP. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 6 shows the BEHP results using the Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 7 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. For Figures 1 through 7, a red circle is used to depict a well where the concentration of one or more analytes was greater than or equal to the lowest MCL or HA for the analyte(s). A yellow circle is used to depict a well where the concentration of all analytes was less than the lowest MCL or HA. A green circle is used to depict a well where the given analytes were not detected in groundwater samples. For Figure 8, a red circle is used to depict a well where the concentration of perchlorate was greater than or equal to 4 ppb. An orange circle is used to depict a well where the concentration of perchlorate is above 1 ppb and below 4 ppb. A yellow circle is used to depict a well where the concentration of perchlorate was less than 1 ppb. A

green circle is used to depict a well where perchlorate was not detected in groundwater samples. For all figures, an open circle is used to depict a proposed well where the analytes in question for example, Explosives in Figure 1, have not yet been quantified. A black circle represents a well that has been sampled for analytes, but validated groundwater data is not yet available.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. The screen labels are colored to indicate which of the depths had the chemical detected above MCLs/HAs/4 ppb concentration for perchlorate. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70-foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/HA/4 ppb concentration for perchlorate results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions varies according to the type of analytes. There are little or no differences between historical and current exceedances of drinking water criteria for Explosives, Perchlorate, VOCs, Pesticides, and Herbicides; the minor differences are mentioned in the following paragraphs. There are significant differences between historical and current exceedances of drinking water criteria for Metals and SVOCs, as described further below.

#### Figure 1: Explosives in Groundwater Compared to MCLs/HAs

For data validated in April 2006, no wells had first-time validated detections of explosives above the MCL/HAs. Two wells, MW-197M2 (J-3 Range) and MW-435M2 (Demo 2), had first-time validated detections of RDX below the HA of 2 ppb.

Exceedances of drinking water criteria for explosive compounds are indicated in six general areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, 129, 165, 210, and 211);
- Demo Area 2 (wells 16, 160, 259, 262, and 404);
- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 43, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 206, 207, 209, 223, 235, OW-1, OW-2, and OW-6);
- J Ranges and southeast of the J Ranges (wells 45, 58, 130, 132, 147, 153, 163, 164, 166, 171, 191, 196, 198, 215, 218, 227, 234, 247, 265, 289, 303, 306, 324, 326, 343, 346, 360, 368, 398, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013).
- Landfill Area 1 (wells 27MW0018A, 27MW0020A, and 27MW0020B); and
- Northwest Corner of Base Boundary (well 323)

Exceedances of drinking water criteria were measured for TNT at Demo Area 1 (wells 19S, 31S, 31M, and 31D) and Southeast of the Ranges (196S). Exceedances of the HA for RDX were noted at all of the locations listed above except at MW-45, MW-196, and the LF-1 wells. Exceedances of drinking water criteria were measured for 2,6-dinitrotoluene (2,6-DNT) at MW-45S. Exceedances of drinking water criteria were measured for 1,3-dinitrobenzene at LF-1 wells 27MW0018A, 27MW0020A and 27MW0020B.

Demo Area 1 has a single well-defined source area and extent of contamination. The estimated extent of RDX exceeding the HA at Demo Area 1 based on the most recent groundwater measurements is indicated by a magenta concentration contour line on Figure 1 and Inset A.

Demo Area 2 has five groundwater exceedances of the RDX HA at MW-16S, MW-160S, MW-259, MW-262M1, and MW-404M2. The extent of the contamination is currently under investigation.

The Impact Area has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the east, northeast. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. The extent of RDX has largely been defined in the Impact Area and the investigation phase of the project is nearing completion.

The J Ranges and downgradient areas have five groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. The five plumes originate at the J-1 Range Interberm Area (northern plume in the vicinity of MW-58 and MW-265), the J-2 Range North plume (northern plume extending from MW-130), the J-2 Range East plume (eastern plume including MW-215), the J-3 Range Demolition Area (southern plume extending from MW-163 south to Snake Pond) and the L Range (in an area defined by MW-147 and MW-153 at Greenway Road). All the J ranges and the L Range are currently under investigation and the plumes will be updated and refined as new validated data is received.

The Northwest Corner of the base boundary has one validated detection of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has a validated detection of RDX in groundwater below 2 ppb.

Figure 2: Metals in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Exceedances of the arsenic drinking water criteria were repeated at three (wells 58MW0010A, MW-7M1 and MW-45S) of the six locations with arsenic exceedances. At the remaining three locations (wells MW-3D, MW-52M2 and MW-152M1), arsenic exceedances were not repeated in subsequent results. Cadmium (well MW-52M3) and chromium (well MW-7M1) were each detected above drinking water criteria in a single sampling round in August-September 1999. Exceedances of the drinking water criteria for lead were repeated at two of four locations (wells ASP and MW-45S). At the remaining two locations (wells MW-2S and MW-7M1) lead exceedances were not repeated in subsequent results. Exceedances of the drinking water criteria for molybdenum were repeated at two of eight locations (wells MW-53M1 and MW-54S) with molybdenum exceedances. All of the molybdenum exceedances were observed in year

1998 and 1999 results. Exceedances of the drinking water criteria for sodium were repeated at 12 of the 21 locations with sodium exceedances (wells MW-2S, MW-21S, MW-46S, MW-57M3, MW-57M2, MW-57M1, MW-144S, MW-145S, MW-148S, MW-187D, ASP and SDW261160). Seven wells (MW-21S, MW-57M1, MW-57M3, MW-187D, BHW215083B, BHW215083D and ASP) had sodium exceedances in year 2004, 2005, and/or 2006 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of the ICP/GFAA and ICP/MS methods, discussed in the next paragraph. None of the 13 locations with antimony exceedances had repeated exceedances and only one exceedances (well MW-38M2) was measured since January 2003. Eleven of the 72 locations with thallium exceedances had repeated exceedances in subsequent sampling rounds (wells MW-7M1, MW-19S, MW-45S, MW-47M2, MW-47M3, MW-52S, MW-52D, MW-54S, MW-54M1, MW-58S and MW-94M2). There have been no exceedances of thallium since January 2003.

Groundwater samples sent for metals analysis are analyzed for most metals by Inductively Coupled Plasma (ICP) in accordance with U.S. EPA Contract Laboratory Program Statement of Work ILM04.0. In May of 2001, the IAGWSP began analyzing for antimony and thallium using the GFAA (graphite furnace atomic adsorption) method in accordance with EPA Drinking Water Methods 204.2 (antimony) and 279.2 (thallium) in order to achieve lower detection limits for these metals. Both the ILM04.0 and GFAA methods are subject to false positive results at trace levels due to interferences. As a result, the IAGWSP changed to a new method to achieve lower detection limits for antimony and thallium in January of 2003. Groundwater samples are now analyzed for antimony and thallium by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method 6020. The ICP/MS Method 6020 has greater sensitivity and the added feature of selectivity for antimony and thallium. These additional methods achieve lower detection limits for these two metals and reduce the number of false positive results.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds. The IAGWSP evaluated inorganic background concentrations using the groundwater quality database of 1999, and submitted a draft report describing background groundwater quality in December 1999.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for VOCs are indicated in six general areas: Northeast Corner (well LRMW003), Impact Area boundary (MW-28S), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), LF-1 (well 27MW0017B), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (well MW-187D). CS-10, LF-1, and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program. Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for methylene chloride, toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE. Detections of benzene, tert-butyl methyl ether, and chloromethane at J-1 Range well MW-187D, chloromethane at Northeast Corner well LRMW003, and 1,2-dibromo-3-chloropropane at Impact Area boundary well MW-28S are currently under investigation.

**Figure 4: Chloroform in Groundwater Compared to MCLs**

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MassDEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of chloroform is provided in the Final Central Impact Area Groundwater Report (06/01). To date, the source of the chloroform in the Upper Cape groundwater has not been identified.

**Figure 5: SVOCs in Groundwater Compared to MCLs/HAs**

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of two wells. MW-264M1 (J-3 Range) had a detection of benzo(a)pyrene at concentrations of more than twice the HA and MW-241M1 ( L Range) had detections of naphthalene above the HA of 100 ppb. Detections of BEHP are presented separately in Figure 6 and discussed in the next paragraph.

**Figure 6: BEHP in Groundwater Compared to MCLs**

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods, introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 90) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), and 90WT0013 (located at FS-12), and MW-146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Eleven wells (27MW0705, 27MW2061, C2-B, C6-C, C7-B, MW-47M2, MW-164M1, MW-168M1, MW-188M1, MW-196M1, and MW-198M1) had BEHP exceedances in the year 2002 and 2003 results. There have been no exceedances of BEHP in 2004 and one exceedance of BEHP, at MW-356M1 (J-3 Range), in 2005.

**Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAs**

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in June 1999. This well was sampled again in November 1999. The results of the November sample indicate no detectable pesticides although hydrocarbon interference was noted. It appears from the November sample that pesticides identified in the June sample were false positives. However, the June sample results cannot be changed when following the EPA

functional guidelines for data validation. The text of the validation report for the June sample has been revised to include an explanation of the hydrocarbon interference and the potential for false positives.

There has been one exceedance of drinking water criteria for herbicides, at well MW-41M1 (Impact Area). This response well was installed downgradient of the Impact Area. The exceedance was for the herbicide pentachlorophenol in a sample collected in May 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, 2002, and 2003.

#### Figure 8: Perchlorate in Groundwater Compared to a 4 ppb Concentration

For data validated in April 2006, no wells had first-time validated detections of perchlorate above or below the concentration of 4 ppb.

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Exceedances of the 4 ppb concentration of perchlorate are indicated in six general areas:

- Demo Area 1 (wells 19, 31, 32, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, 211, 225, 258 and 341);
- Impact Area (well 91);
- J Ranges and southeast of the J Ranges (wells 127, 130, 132, 143, 163, 193, 197, 198, 232, 243, 247, 250, 263, 265, 286, 289, 293, 300, 302, 303, 305, 307, 310, 313, 321, 326, 339, 346, 348, 368, 370, and wells 90PZ0211, 90MW0022 and 90MW0054);
- Landfill Area 1 (27MW0031B);
- CS-18 (well 16MW0001); and
- Northwest Corner of Base Boundary (wells 4036009DC, 270, 277, 278, 279, 284, and 309).

Demo Area 1 has a single well-defined source area and extent of contamination. The downgradient extent of the perchlorate plume has been determined with the installation of monitoring wells along the power line right-of-way east of Fredrickson Road.

The Impact Area has a single location with an exceedance of the 4 ppb concentration of perchlorate at MW-91S.

Plumes have been identified in four areas in the J Ranges. The J-1 Interberm perchlorate plume has several detections of greater than 4 ppb in downgradient locations MW-265, MW-286, MW-303, MW-326, MW-346, and MW-370. The J-3 Range Demolition perchlorate plume has concentrations greater than 4 ppb in several wells immediately downgradient of the source area, which is centered at MW-198, and further downgradient centered near location 90MW0054. The J-2 Range North perchlorate plume has detections greater than 4 ppb at source area locations MW-130 and MW-263, and downgradient locations MW-289, MW-293, MW-300, MW-302, MW-305, and MW-313. The J-2 East perchlorate plumes are in the process of delineation and include detections greater than 4 ppb at MW-307, MW-310 and MW-368. Perchlorate detections at the L Range are below 4 ppb and a plume is not depicted on the figure.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. This area is under investigation and the plume will be updated and refined as new data is received.

The LF-1 and CS-18 areas are under investigation by AFCEE in the Superfund Program.

#### Rush (Non-Validated) Data

Rush data are summarized in Table 7. These data are for analyses that are performed on a fast turnaround time, typically 1 to 10 days. Explosive analyses for monitoring wells, and explosive and VOC analyses for profile samples, are typically conducted in this timeframe. Other types of analyses may be rushed depending on the proposed use of the data. The rush data have not yet been validated, but are provided as an indication of the most recent preliminary results. Table 7 summarizes only detects, and does not show samples with non-detects.

The status of the detections with respect to confirmation using Photo Diode Array (PDA) spectra is indicated in Table 7. PDA is a procedure that has been implemented for the explosive analysis, to reduce the likelihood of false positive identifications. Where the PDA status is "YES" in Table 7, the detected compound is verified as properly identified. Where the status is "NO", the identification of an explosive has been determined to be a false positive. Where the status is blank, PDA has not yet been used to evaluate the detection, or PDA is not applicable because the analyte is a VOC. Most explosive detections verified by PDA are confirmed to be present upon completion of validation.

Table 7 includes the following detections:

#### J-2 Range

- Profile samples collected from MW-436 (J2P-59) had detections of VOCs. Explosives and perchlorate were not detected in profile samples. Well screens will be set at the depth (125 to 135 ft bwt) corresponding to top portion of the RDX and perchlorate plume observed at upgradient well MW-393 and the depth (185 to 195 ft bwt) corresponding to the main zone of perchlorate contamination observed at upgradient well MW-393M1.

## **4. DELIVERABLES SUBMITTED**

Deliverables submitted during the reporting period include the following:

Final J-1 Range North Interim Groundwater Monitoring Plan	04/03/2006
Monthly Progress Report # 108 for March 2006	04/07/2006
Final J-2 Range East Interim Groundwater Monitoring Plan	04/14/2006
Final J-2 Range North Rapid Response Action Performance and Monitoring Evaluation Plan	04/20/2006
Final Bivouac Area 1 Soil Excavation and Sampling Letter Report	04/27/2006
Draft J-1 Range Priority 1 Grids Supplemental Geophysical Anomaly Investigation Report – Technical Memorandum	04/28/2006

## **5. SCHEDULED ACTIONS**

Figure 9 provides a Gantt chart updated as of December 4, 2005 to reflect progress and proposed work. The following documents are scheduled to be submitted in May and early June:

- J-2 Range Groundwater Draft Remedial Investigation Report
- J-3 Range Soil Final Remedial Investigation Report
- Northwest Corner Final Remedial Investigation Report
- Phase 2b Sites Final Remedial Investigation Report
- Small Arms Range Final Rapid Response Action Workplan

The following documents are being prepared or revised during May and early June:

- J-1 Range Groundwater Draft Remedial Investigation Report
- J-1 Range Groundwater Draft Rapid Response Action Plan
- J-3 Range Groundwater Draft Remedial Investigation Report
- L Range Groundwater Final Risk Assessment Report
- Central Impact Area Soil Revised Draft Focused Investigation Report
- Central Impact Area Soil and Groundwater Draft Feasibility Study Screening Report
- Western Boundary Final Remedial Investigation Report
- Northwest Corner Draft Feasibility Study Report
- Demo 2 Groundwater Draft Remedial Investigation Report
- Gun and Mortar Final Groundwater and Soil Remedial Investigation Workplan
- Former A Range Draft Remedial Investigation Report
- Ammunition Supply Point Draft Rapid Response Action Completion of Work Report
- Small Arms Range Draft Remedial Investigation Report
